

Barre Assembly Instructions

Your package should include two uprights, two bases, one long barre, two pins with cables attached, and an Allen wrench. Assemble as follows:

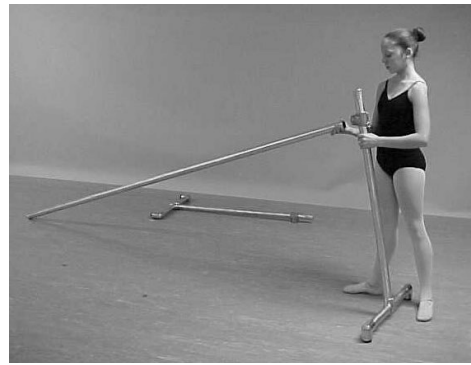

1. Attach one elbow to base. Insert to blue line as shown. Slide base through tee fitting on bottom of upright.

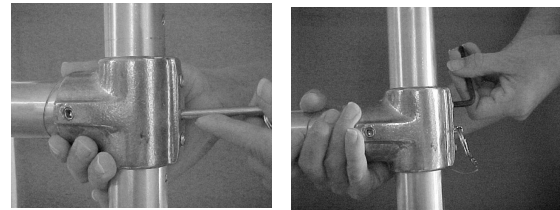

2. Center base on upright between blue lines and tighten set screw.

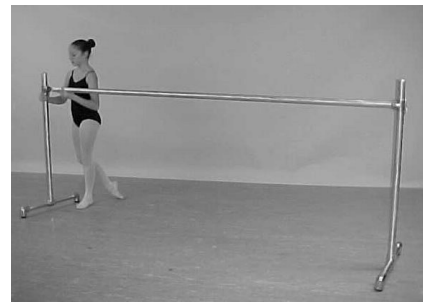

3. Insert second elbow to blue line and tighten set screw, making sure base will sit level on the floor.

4. Insert one end of long barre fully into tee on upright as shown. Tighten set screw holding long barre.

5. Insert pin fully into center hole at desired height then tighten set screws for added stability.

6. Assemble other upright and base. Insert other end of long barre fully into tee on upright. Adjust the elbows on each base so that they sit level on the floor. Tighten all set screws securely.
7. If your barre seems unstable it is not properly assembled. Periodically check and tighten set screws as needed.
8. For flat storage, pivot legs 90 degrees and insert pins in holes provided. Clean barre as needed with Simple Green® or similar cleaner.
